GPA is calculated by reviewing the applicant's transcript for the seven scored courses or accepted course substitutions. If course grades are reported in letters, the equivalent score on the 4.0 scale is used.

A = 4

A- = 3.7

B+ = 3.3

B = 3.0

The credit value of the course is not included in the calculation in order to remove the influence of courses taken at semester, trimester, or quarter programs. The seven course grade scores are added together and then divided by 7 to determine the GPA. The GPA is multiplied by 70 (maximum points available), and then divided by 4 (maximum course grade is 4.0) to award the point value for the individual student. Points awarded for the other criteria are dependent on the applicant providing satisfactory information to support the criterion at the time of application.
